

TOUGH FLOORS

FOR TOUGH SPECIFICATIONS

If you have a floor, we have you covered!

Flooring

COR-CAST flooring systems are a family of trowel-applied chemical resistant mortar systems used to protect or resurface concrete. These chemical resistant systems are typically installed at 1/8" to 1/4" thick, feature dust-free aggregate technology and offer outstanding resistance to impact, thermal movement and mechanical wear.

Concrete Repair

PERMALITH™ concrete repair systems are available in a variety of formulations to meet the structural requirements of rebuilding, resloping or repairing concrete prior to the application of protective coating and lining systems.

Ceramic Carpet

CERAMIC CARPET™ are broadcast flooring systems that use colored quartz to yield multi-colored, decorative finishes. The texture of these systems can be varied to achieve skid-inhibiting or smooth surfaces.

Crack Bridging

EPO-FLEX® technologies provide state-of-the-art practical solutions to reflective substrate cracking to help insure maximum service life for protective coatings and linings. EPO-FLEX flexible epoxy systems

are based on 100% solids (zero VOC) epoxy technology and contain no plasticizers; it will remain flexible through temperature cycles and age. EPO-FLEX has outstanding adhesion to concrete and requires no special primers.
